

Easy CodeAlpha Python Project Recommendation

Recommended Project: Basic Chatbot

Reason: It is the easiest project because it uses only if-elif conditions, loops, functions and user input. No external libraries are required.

About the Project

A basic chatbot is a simple program that responds to user messages using predefined answers. It accepts text from the user and prints suitable replies.

Python Program

```
def chatbot():
    while True:
        msg=input("You: ").lower()
        if msg=="hello":
            print("Bot: Hi!")
        elif msg=="how are you":
            print("Bot: I'm fine, thanks!")
        elif msg=="bye":
            print("Bot: Goodbye!")
            break
        else:
            print("Bot: Sorry, I don't understand.")
chatbot()
```

Sample Output

```
You: hello
Bot: Hi!
You: how are you
Bot: I'm fine, thanks!
You: bye
Bot: Goodbye!
```
